

## HIGH GRADE DIAMOND SAW ASSAYS EXPAND DRILL TARGETS

### Highlights

- Exceptional diamond rock saw channel sample results from surface structures and underground workings at Mithril's flagship high-grade Copalquin gold-silver district in Durango, Mexico.
- **El Refugio mine – main level**
  - 3.5m @ 8.30 g/t gold, 239 g/t silver (L1)
  - 2.5m @ 7.99 g/t gold, 191 g/t silver (L2)
  - 3.0m @ 5.52 g/t gold, 154 g/t silver (L3)
  - 3.0m @ 6.01 g/t gold, 156 g/t silver (L4)
- **El Refugio mine – second level**
  - 1.5m @ 8.96 g/t gold, 325 g/t silver (L11)
  - 1.5m @ 9.33 g/t gold, 173 g/t silver (L12)
  - 1.5m @ 34.4 g/t gold, 372 g/t silver (L25)
  - 1.5m @ 4.20 g/t gold, 129 g/t silver (L26),
  - 2.0m @ 6.91 g/t gold, 148 g/t silver (L28),
  - 3.0m @ 11.0 g/t gold, 250 g/t silver (L29),
  - 2.0m @ 39.2 g/t gold, 401 g/t silver (L30), including 1.0m @ 70.7 g/t gold, 710 g/t silver
- **El Refugio Surface Prospect**
  - 1.7m @ 5.68 g/t gold, 106 g/t silver
  - 1.9m @ 9.56 g/t gold, 215 g/t silver
  - 1.8m @ 11.5 g/t gold, 226 g/t silver
  - 1.3m @ 4.76 g/t gold, 100 g/t silver
- **480 Cometa Surface Structure**
  - 10.5m @ 4.47 g/t gold, 121 g/t silver
- **Cometa 2 Working**
  - 1.0m @ 1.74 g/t gold, 914 g/t silver
- **La Soledad Mine Level 4**
  - 2.8m @ 6.92 g/t gold, 133 g/t silver (L3)
- **Copalquin Creek Line**
  - 3.0m @ 8.02 g/t gold, 78 g/t silver
- **Copalquin Mine**
  - 2.0m @ 5.32 g/t gold, 245 g/t silver

Mithril Resources Ltd (ASX: MTH) (**Mithril** or the **Company**) is pleased to provide an update for its high-grade Copalquin gold-silver project located in Durango state, Mexico.

## COPALQUIN GOLD-SILVER DISTRICT, MEXICO

A diamond rock saw channel sampling programme has been completed for the first phase work at the first target area in the Copalquin district where there is currently a maiden JORC resource of 529koz @6.8 g/t gold equivalent (see end of announcement for resource details).

The results from the programme will assist drill planning for the current drill programme and future programmes.

**Mithril Managing Director/CEO John Skeet said,**

*"The exceptional high-grade gold and silver results from this mapping and sampling programme at the district Target 1 area, provide important geologic information to improve understanding of the mineralised structures. This aids drill programme design and 3D modelling, which can also be applied to other target areas in this large historic mining district as we continue to expand the resource footprint."*

**Mithril Technical Advisor, Colin Jones said,**

*"The excellent sampling and mapping results from the historic Copalquin mine working support the concept of a major east-west vent system responsible for the widespread surface alteration and gold-silver mineralisation across the district. In general, it is clear there are more mineralised structures present than currently mapped, and the alteration zones are larger than as currently outlined."*

### Discussion

This sampling programme used a diamond saw to cut underground and outcropping veins in a geologically unbiased manner as a method to support detailed mapping and interpretation of various structures. For future resource estimation work at the Target 1 area, these results may be included in JORC resource estimates with survey and proper QAQC carried out to JORC 2012 Standards.

Figure 1 Map showing highlight diamond saw sampling result from Target Area 1, in the Copalquin District. Some highlight drill intercepts from 2020-2022 drilling also shown, which were part of the maiden JORC resource estimate for this target area.

The diamond rock saw mapping and sampling assays show there are structures interacting with the broad east-west low angle structure that extends for several kilometres across the district. The various mapped structures sampled in underground workings and surface structures show significant gold and silver mineralisation. The results support drilling in different orientations in the Target 1 area to intersect the different mineralised structures and provides some visual evidence of faulting.

On the eastern side of Target 1 JORC resource area at El Cometa (see Figure 1), high-grade diamond saw sampling assays returned from a working (**Cometa 2 - 1.0m @ 1.74 g/t gold, 914 g/t silver**) down slope of the El Cometa mine plus a 10.5 metre wide NW trending cross cutting surface structure (**Cometa 480 - 10.5m @ 4.47 g/t gold, 121 g/t silver**). Previous drilling into a NW trending structure at El Cometa intercepted very high-grade near surface (**CDH-072 6.8m @74 g/t gold, 840 g/t silver from 35.2m**).

At the historic El Refugio mine working, new areas have been accessed, mapped and sampled returning high-grade assays providing enhanced interpretation of the structures in this important area. The main and second levels of the workings have been sampled for the first time and well as newly accessible areas (see Figures below).

Figure 2 Cross section of the historic El Refugio mine workings, looking north with diamond saw sampling assay results. New areas have been accessed, mapped and sampled with survey pending to complete updated workings model. The detailed work has provided useful information regarding the various structures, breccias and faulting and the mineralisation. Sample from line 30 (L30 - 2.0m @ 39.2 g/t Au, 401 g/t Ag) is from a stope pillar, which provides an indication of the material historically mined.

Figure 3 Inside El Refugio workings, Left to right - Sample line 12 (L12) - 1.5m @ 9.33 g/t Au, 173 g/t Ag, Sample line 28 (L28) - 2.0m @ 6.91 g/t Au, 148 g/t Ag, Sample line 30 (L30) - 2.0m @ 39.2 g/t Au, 401 g/t Ag.

\*Resource estimate details at end of announcement

A photograph of a rock sample, likely a piece of ore, with red survey lines drawn on it. A white pointer indicates a specific location on the rock. The rock is dark and textured, with some lighter-colored veins or fractures. The red lines form a grid pattern, with one line running horizontally across the middle and another running vertically on the left side. The white pointer is a thin rod pointing to a spot on the rock. The background is a light-colored, possibly concrete, surface.

Sample 5737 1m @ 18.25 g/t Au, 93.7 g/t Ag, 19.59 AuEq g/t

Copalaquin Creek Sampling Line

A photograph of a cave interior. The rock walls are uneven and textured. Two sets of red spray-painted lines, resembling surveying or mapping, are visible on the upper part of the cave walls. Each set includes the number '5340' written in red. A bright, arched opening in the center of the cave leads to a snowy, mountainous landscape outside. The floor of the cave is dark and appears to be covered in dirt or snow. Some white plastic bags or debris are scattered on the floor near the entrance.

**MITHRIL**  
RESOURCES

The Copalquin mine workings have been developed on two levels along an east-west striking quartz vein. No stoping has been done. The main vein is 50cm to 1m wide and comprises a multiphase quartz vein that exhibits well developed epithermal banding textures, including colloform banding and thin bands of sulphides. Copper oxide minerals are also observed. Inspection of a cross cut underground and the outcrop along the creek at the entrance to the workings shows that the main vein is associated with a 6m wide zone of similar but thinner veins. This structure is hosted in granodiorite and extends west into the Los Pinos alteration zone. A 9.0m wide diamond saw sample was taken across the structure yielding 9.0m @ 2.72 g/t gold, 34.4 g/t silver, including **3.0m @ 8.02 g/t gold, 78 g/t silver**.

This structure would be easy to drill in terms of access and is considered as a first priority target subject to detailed mapping and sampling of the area.

Diamond rock saw channel sample details in the following table next page.

## ABOUT THE COPALQUIN GOLD SILVER PROJECT

The Copalquin mining district is located in Durango State, Mexico and covers an entire mining district of 70km<sup>2</sup> containing several dozen historic gold and silver mines and workings, ten of which had notable production. The district is within the Sierra Madre Gold Silver Trend which extends north-south along the western side of Mexico and hosts many world-class gold and silver deposits.

Multiple mineralisation events, young intrusives thought to be system-driving heat sources, widespread alteration together with extensive surface vein exposures and dozens of historic mine workings, identify the Copalquin mining district as a major epithermal centre for Gold and Silver.

Within 15 months of drilling in the Copalquin District, Mithril delivered a maiden JORC mineral resource estimate demonstrating the high-grade gold and silver resource potential for the district. This maiden resource is detailed below (see ASX release 17 November 2021)<sup>^</sup>.

With over seventy historic gold-silver mines and workings throughout 70km<sup>2</sup> of mining concession area, Copalquin is an entire mining district with high-grade exploration results and a maiden JORC resource. To date there are four interpreted hydrothermal upwelling zones in the district with one already hosting a high-grade gold-silver JORC resource at El Refugio (529koz AuEq @6.81 g/t AuEq)<sup>1</sup>. There is considerable strike and depth potential to increase the resource at El Refugio and at other target areas across the district.

With the district-wide gold and silver occurrences and rapid exploration success, it is clear the Copalquin District is developing into another significant gold-silver district like the many other districts in this prolific Sierra Madre Gold-Silver Trend of Mexico. These districts can host 1 – 5 million ounces of gold plus 50 – 100+ million ounces of silver.

Figure 7 – Satellite image of the Copalquin Mining District 70km<sup>2</sup> concession area showing the two main lines of historic workings, areas of exploration work and the location of the maiden JORC MRE at the first target area of El Refugio-La Soledad.

- 2,416,000 tonnes @ 4.80 g/t gold, 141 g/t silver for 373,000 oz gold plus 10,953,000 oz silver (Total 529,000 oz AuEq\*) using a cut-off grade of 2.0 g/t AuEq\*
- 28.6% of the resource tonnage is classified as indicated

Table 2 - Mineral resource estimate El Refugio – La Soledad using a cut-off grade of 2.0 g/t AuEq\*

\* The gold equivalent (AuEq.) values are determined from gold and silver values and assume the following: AuEq. = gold equivalent calculated using and gold:silver price ratio of 70:1. That is, 70 g/t silver = 1 g/t gold. The metal prices used to determine the 70:1 ratio are the cumulative average prices for 2021: gold USD1,798.34 and silver: USD25.32 (actual is 71:1) from kitco.com. Metallurgical recoveries are assumed to be approximately equal for both gold and silver at this early stage. Actual metallurgical recoveries from test work to date are 96% and 91% for gold and silver, respectively. In the Company's opinion there is reasonable potential for both gold and silver to be extracted and sold. Actual metal prices have not been used in resource estimate, only the price ratio for the AuEq reporting.

^ The information in this report that relates to Mineral Resources or Ore Reserves is based on information provided in the following ASX announcement: 17 Nov 2021 - MAIDEN JORC RESOURCE 529,000 OUNCES @ 6.81 G/T (AuEq\*), which includes the full JORC MRE report, also available on the Mithril Resources Limited Website.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Mining study and metallurgical test work supports the development of the El Refugio-La Soledad resource with conventional mining methods indicated as being appropriate and with high gold-silver recovery to produce metal on-site with conventional processing.

Mithril is currently exploring in the Copalquin District to expand the resource footprint, and develop other targets, demonstrating the district multi-million-ounce gold and silver potential.

Mithril has an exclusive option to purchase 100% interest in the Copalquin mining concessions (currently owns 50%) by paying US\$10M on or any time before 7 August 2028.

## Competent Persons Statement

The information in this announcement that relates to metallurgical test results, mineral processing and project development and study work has been compiled by Mr John Skeet who is Mithril's CEO and Managing Director. Mr Skeet is a Fellow of the Australasian Institute of Mining and Metallurgy. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Skeet has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Skeet consents to the inclusion in this report of the matters based on information in the form and context in which it appears. The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

The information in this announcement that relates to sampling techniques and data, exploration results and geological interpretation for Mithril's Mexican project, has been compiled by Mr Ricardo Rodriguez who is Mithril's Project Manager. Mr Rodriguez is a Member of the Australasian Institute of Mining and Metallurgy. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Rodriguez has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Rodriguez consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The information in this announcement that relates to Mineral Resources is reported by Mr Rodney Webster, Principal Geologist, AMC Consultants Pty Ltd (AMC), who is a Member of the Australasian Institute of Mining and Metallurgy. The report was peer reviewed by Andrew Proudman, Principal Consultant at AMC. Mr Webster is acting as the Competent Person, as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, for the reporting of the Mineral Resource estimate. A site visit was carried out by Jose Olmedo a geological consultant with AMC, in September 2021 to observe the drilling, logging, sampling and assay database.

The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

| <b>Sampling techniques</b>   | <ul style="list-style-type: none"> <li><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i></li> <li><i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></li> <li><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></li> <li><i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></li> </ul> | <ul style="list-style-type: none"> <li>- Rock Sawn Channel samples were collected of Au-Ag (Acanthite) bearing quartz veins, silicification, and breccia zones as well tectonic and hydrothermal breccias structures within a Tertiary volcanics under the supervision of a qualified geologist.</li> <li>- Rock Sawn Channel samples with a weight of 3.5 to 6 kilograms were collected from representative exposures. Underground samples were collected from Refugio Mine, Soledad Level 4, Cometa Mine, and Cometa 2 and Rock Saw Channel surface samples were collected from 480 Cometa Structure, and Copalquin Creek Line</li> <li>- Rock Sawn Channel samples underground and surface were done with the assistance of a handheld portable saw 2.5 to 3cm deep and 6-8 cm wide along continuous lines oriented perpendicular to the mineralized structure. The samples are as representative as possible</li> <li>- Rock Sawn Channel surface samples were surveyed with a Handheld GPS then permanently mark with an aluminium tag and red colour spray across the strike of the outcrop over 1 metre. Samples are as representative as possible</li> <li>- Rock Sawn Channel underground samples were located after a compass and tape with the mine working having a surveyed control point at the portal, then permanently marked with an aluminium tag and red colour spray oriented perpendicular to the mineralized structure. Samples are as representative as possible</li> <li>- Standards and blanks were inserted and photographs taken of each interval samples which averaged 1 m</li> <li>- Samples are dried and prepared at the laboratory. Samples were crushed to approximately 85% passing 2mm. A 500g or a 1 kg sub-sample was taken and pulverized to 85% passing 75µm. A 50g charge was analysed for Au by fire assay with AA determination. Where the fire assay grade is &gt; 10g/t gold, a 50g charge was analysed for Au by Fire assay with gravimetric determination. In addition, a 10g charge was analysed for 34 elements by 4-acid digest and ICP-AES determination.</li> <li>- For Ag &gt; 100 g/t, Zn, Pb and Cu &gt; 10,000 ppm and S &gt; 10%, overlimit analysis was done by the same method using a different calibration</li> <li>- Unused pulps are returned from the laboratory to the office and stored in a secure location, so they are available for any further analyses.</li> </ul> |
| <b>Drilling techniques</b>   | <ul style="list-style-type: none"> <li><i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <ul style="list-style-type: none"> <li>No drilling is being reported</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

This deposit type is common in the Sierra Madre Occidental of Mexico and is characterized by quartz veins and stockworks surrounded by haloes of argillic (illite/smectite) alteration. Veins have formed as both low-angle semi-continuous lenses parallel to the contact between granodiorite and andesite and as tabular veins in high-angle normal faults. Vein and breccia thickness has been observed up to 30 meters wide with average widths on the order of 3 to 5 meters. The overall strike length of the semi-continuous mineralized zone from El Gallo to Refugio, Cometa, Los Pinos, Los Reyes, La Montura to Constanca is almost 6 kilometres. The southern area from Apomal to San Manuel and to Las Brujas-El Peru provides additional exploration potential up to 5km.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |           |        |   |   |   |
